Saya Sync

PITCH DECK

Saya-Sync

Teacher time tracking and payroll you can verify

Teacher captures

Server-stamped time

Admin reviews

Flags reviewed first

Payroll approved

Frozen, auditable total

Pay starts with messy time

From the PRD pain points

Re-collecting class times

Teaching time is pulled back together from chat, paper and Excel before every payroll.

Corrections never finish

Forgotten check-outs and wrong times need chasing, and nobody is sure what was fixed.

Pay is hard to explain

Rates and rate-change dates make totals hard to rebuild, so the numbers are hard to justify.

Month-end closing means chasing records first, then explaining the numbers to teachers.

Who uses it, who pays

Private training centers with part-time teachers

DAILY USERS

Admin

Collects records, chases corrections, verifies sessions and closes pay. The main daily user and the champion for buying.

Teacher

Logs own time, requests fixes and sees approved pay and paid status. Adoption depends on them.

BUYER

School owner / center manager

Decides to buy and approves the budget. Cares about Admin time, clear accounts and running cost.

Hypotheses first, evidence next

No interviews done yet

ASSUMED

PRD pain hypotheses

- Time is re-collected from chat, paper and Excel
- Missed check-outs and wrong times need chasing
- Pay is hard to explain afterwards

Not yet confirmed with real users or paid demand.

DESK RESEARCH

Official competitor comparison

Jibble
Free plan, $0

Clockify Standard
$5.49 per seat/month, yearly billing

Connecteam Basic
$29/month for first 30 users, yearly billing

Official pages, viewed 21 Oct 2026. Re-check before buying.

TO COLLECT

Evidence after interviews

- Interviews: 2 Admins, 3–5 Teachers, 1–2 owners
- A past payroll cycle as a baseline
- Hands-on trials of competitors on the same scenario

Planned only. None done yet.

Rule: no demand is claimed until an owner commits to a dated, paid pilot.

Planned MVP

One story: capture to paid

1

Teacher capture

Check in and out on assigned classes. Request a correction with a reason.

2

Admin review

Compare original and proposed times. Verify sessions as a separate decision.

3

Verified payroll

Only verified minutes times the hourly MMK rate. Admin approves a frozen snapshot.

4

Manual payment history

Pay outside the app, then record date, method and reference. Teacher sees Paid.

Check-in does not prove teaching happened, so Admin verification stays. Pending corrections or missing check-outs hold payroll.

Our edge, to be tested

Burmese UX

Burmese Unicode interface that works on phones for teachers and Admins.

Class and assignment context

Check in only on assigned classes, with dated rates and cover reasons.

Correction and verification

Fix times by request. Original history stays. Verification is its own decision.

Session-to-pay traceability

Each payment traces to its session, minutes, rate, adjustment and reviewer.

Positioning, not proven: competitors may offer similar features. Each point gets a hands-on trial on one school scenario.

Viability: pilot, then paid

Hypotheses, no sales data

1 One-school pilot

2 Two-cycle review

3 Paid continuation test

4 Referral or case study

Who pays

The school owner or center manager buys. Teachers never buy individually.

Pricing to test

Monthly fee per school by teacher-count band. No MMK price until there is willingness-to-pay evidence.

Cost to measure

Hosting, backups, onboarding hours, monthly support and payment collection, against Admin time saved.

SaaS readiness

Before many schools: tenant isolation, per-school setup, data handover, billing and support process.

No customer commitment, price or conversion data yet. One pilot school ID is not multi-school ready.

Where we are, what we need

WHERE WE ARE

PRD review stage. Not yet built, tested or sold.

NEXT STEP

Move from PRD review to a one-school pilot.

A partner school

One school willing to run a scoped pilot.

Admin time

A short workflow interview to start, about 20 minutes.

Anonymized baseline data

One past payroll cycle: volume and time spent collecting, checking and calculating.

Mentor feedback

Review of our research plan and the real school process.
